About Me

I am a 4th-year student at BSUIR, Faculty of Computer Systems and Networks, majoring in Software Engineering. During my university studies, I mastered the basics of computer systems and networks, databases, web development and testing web-oriented applications. Currently, I am developing web applications in Golang as part of my academic projects.

In my academic activities, I strive for a detailed understanding of the subject and, if possible, try to understand the tool before using it. I am keen on exploring various technologies and the problems they solve. I quickly learn new technologies and skills if it helps to solve a task more optimally.

In my free time:

- study computer science
- read books of various genres
- go to the gym

I am looking for opportunities to apply the knowledge I have gained to develop web applications, integrate APIs, and create software.

Key Skills

- Golang
- REST API
- HTTP
- PostgreSQL
- MySQL
- Docker
- Docker-compose

Education

- September 2021 – June 2025
Bachelor, Software Engineer
Belarusian State University of Informatics and Radioelectronics (BSUIR)

Projects

Development of a REST API in Golang for managing projects like a Kanban board

Implementation of CRUD operations

Registration/authentication using JWT authentication

Validation of requests using JSON schemas

Implementation of middleware for handling HTTP requests and validating JSON bodies

Using PostgreSQL to store project data
